BANKSTATEMENTGENERATOR

by UBERMORGEN.COM

The "BANKSTATEMENTGENERATOR" is an online engine that generates individual bank statements. If you need a positive or negative bank statement, generate it yourself!

The core theme of this project is described in the slogan "just pixels on a screen - just ink on paper" and consolidated in the term "authenticity as consensual hallucination" (Inke Arns). The focus shifts from the authenticity in the time of analogue / technical reproduction (signature) towards authenticity in the time of informational reprogramability (automatically generated bank-statements).

In the UBERMORGEN.COM universe, this project can be seen in the tradition of "Legal Art" and specifically the "[F]originals - forged original documents - series. A Foriginal is always original and unique. Foriginals are pixels on screens or substance on material [i.e. ink on paper]. [F]originals are non pragmatic - they are absurd. They do not tell you whether they are real or forged - there is no original but also no fully forged / faked document. Foriginals can be human or machine generated; Foriginals are digital or analog, foriginals are singular multiples.

BANKSTATEMENTGENERATOR Exhibitions

[plug.in] Basel / Switzerland - June 9th - Juli 3rd, 2005
Exhibition "[F]original - Authenticity as consensual hallucination"

Ars Electronica Linz / Austria - September 1st to 6th, 2005
